May we take this opportunity to introduce ourselves, we are a small family run precision sheet metal company based in Exeter, UK. We specialise in producing high quality products for a variety of industries.

Over the years we have built up a very loyal and satisfied customer base, which include manufacturers of:

Audio amplification equipment

Computer networking equipment

Hospital anaesthetic equipment

Machine guarding, panelwork, etc

Magnetic media degaussing equipment

Pressure testing instrumentation

Sound mixing consols

Air cooling equipment

Wood & gas burning stoves

Piece parts are produced on modern CNC machinery to a very high degree of accuracy, and repeatability. Aided by our off line drawing and programming facility, we are able to meet customers exact requirements, be it one offs, to large production runs.

Being a small family run company, we can be totally flexible in lead times, enabling us to manufacture to customers needs, rather than production schedules
